

## [China Extrusion part, Manufacturer, Supplier, Factory, Exporter in china](#)

Aluminum extruded parts are widely used for heat sink or other profile products. Ningbo Zhenhai Xinxie Machinery Co., Ltd. has several reliable aluminum extruded partners with long term relationship. You can source various aluminum extruded parts from us. Empowered with highly experienced engineers, we are specialized in the manufacture of extraordinary, complex and intricate aluminum extrusion parts. While very few extruders can handle a wide range of size, weight and tolerance requirements, our aluminum extrusion products stands out as one of the best. With double presses, our aluminum extrusion products have unsurpassed flexibility and extrusion capability. We can also extrude very large pieces, upto 17 inches in circle size, or very small components, down to one-half inch circle size, with tolerances often exceeding industry standards by 50 percent or more.

The material available for extruded parts mainly included brass and aluminum alloy.

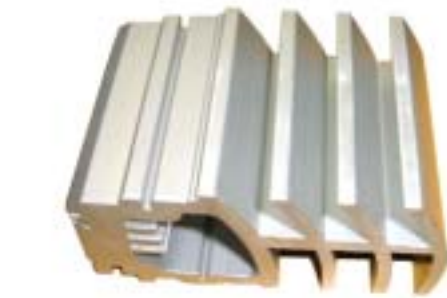

Material: 6063 T6 or specified

Process: tooling making, extrusion, cutting

Machining: turning , milling, drilling, grinding, threading, CNC machining, etc.

Finishing: anodizing,

Inspection: coordinate measuring machine, optical comparator, chemical element analysis, hardness testing, tensile testing, impact testing
